February 2026 update

## Scoping Report Update

A Scoping Direction was issued from PEDW on 11th February 2026.

The Scoping Direction is a formal request made by PEDW to determine the scope and level of detail to be included in the Environmental Statement as part of the supporting documentation of the forthcoming DNS application.

TotalEnergies confirms an Environmental Statement will be produced in line with the comments received from PEDW and due regard given to the consultation response received.

## Water Infiltration Testing

Water infiltration testing has commenced on site. The information gathered from these tests will help determine the site characteristics and the development of the concept drainage design.

In line with good working practices, the trial pits were paused temporarily during the wet weather. Vehicle movements across the soils were also avoided on water-logged ground, as this can result in structural damage.

We are currently evaluating the results we have gathered so far to determine if further infiltration testing is needed or not.

Our flood mitigation strategy is still in progress and further updates will be provided once completed.
